

# NomNom Safe — User Manual

Concise guide to installing, using, and troubleshooting the NomNom Safe app.

## What NomNom Safe Does

- Helps users find restaurants safe for their allergens.
- Filter by allergens and cuisines.
- View restaurant details and menus.
- Manage user profile and allergy selections.

## Quick Start

1. Open the app and Sign Up for a new account, or Sign In if you already have one.
2. On the Home screen, review available restaurants and filters.

## Main Screens (Overview)

- Home: filter by allergen and cuisine; browse restaurants.
- Sign In / Sign Up: authenticate with email & password.
- Profile / Edit Profile: manage name, email, password, and allergy list.
- Menu Detail: read menu items and allergen information.
- Restaurant Detail: read contact and business information for each restaurant.

# Signing Up

- Tap "Sign Up" on the welcome screen.
- Provide first name, last name, email, and password (min 6 chars).
- Choose allergens (optional) to pre-populate filters.
- Tap "Create Account"; if successful you will be signed in.

## Signing In

- Tap "Sign In", enter your email and password, then tap "Sign In".
- On success, the app returns to Home and loads your saved allergy preferences.

## Using the Home Screen

- Allergens button: open the filter modal to select allergens.
- Cuisines button: select one or more cuisines to narrow results.
- Restaurant list: tap a restaurant card to view details and menu items.

## Editing Profile

- Tap the Profile icon on the bottom navigation bar.
- Select Edit Profile.
- Change first/last name or email; update allergies from the list.
- Save Changes to persist — changes update your saved preferences and filters.

## Filters & Results

- Selected allergens remove restaurants lacking allergen-free menu items.
- Allergen and cuisine filters can be applied simultaneously.
- If all restaurants are filtered out, broaden allergens or cuisines.

Best practice: pick your allergens first, then refine cuisines.

## Troubleshooting (Quick)

- Sign-in fails: check email/password.
- Filters not updating: refresh or reopen the app to reload data.
- Missing restaurants or menus: contact support with the restaurant name.

## Privacy & Data

- Account data (name, email, allergies) is stored to personalize filters.
- The app uses secure backend services to store user profiles and menu data.

If you need your data removed, contact the app owner or support.

## Quick Tips

- Save profile changes before leaving the screen.
- When in doubt, clear filters to broaden results.
